EDUCATION

RCC Institute of Information Technology Oct 2024 – Jul 2026

Master of Computer Applications | CGPA: 7.04 Kolkata, West Bengal

TECHNICAL SKILLS

+

Languages: Java, JavaScript (ES6+)

Frontend: React.js, React Native, HTML5, CSS3, Tailwind CSS

Backend: Spring Boot

Databases: MySQL (relational schema design), MongoDB (document store)

DevOps & Tools: Git, GitHub (PR workflow, branching strategies), Docker (containerization)

PROFESSIONAL EXPERIENCE.

QBayes Dec 2025 – Present | Remote

App Developer (Frontend)

- Architected and delivered the full frontend of a production-grade Learning Management System (LMS) from scratch using React.js and Tailwind CSS, encompassing course browsing, student dashboards, and role-based UI for instructors and learners.
- Engineered a secure authentication flow — login, registration, and protected route guards — fully integrated with backend auth services via JWT-based session management.
- Developed and connected 8+ React components to RESTful APIs, standardizing async data-fetching patterns and reducing page-load state inconsistencies across the application.
- Maintained a clean, reviewable Git/GitHub PR workflow within a distributed team, including structured feature branching, code reviews, and merge conflict resolution.
- **Tech Stack:** React.js, React Native, Tailwind CSS, REST APIs, Git, GitHub

PROJECTS.

Invoice Generator — Digital Billing & Payment Solution Sep – Dec 2025

ReactJS · Spring Boot · MongoDB · Clerk Auth · Docker · Cloudinary

- Built a full-stack invoice management platform enabling users to create, customize, preview, and export invoices as PDFs with dynamic templating and real- time data binding between form inputs and the rendered invoice layout, supporting multiple currency formats and tax configurations.
- Implemented role-based access control distinguishing admin and client views; integrated Clerk for secure multi-user authentication including social login, session handling, and protected API routes backed by JWT token validation on the Spring Boot layer.
- Used MongoDB for persistent invoice and client data storage with indexed querying for fast retrieval across large datasets; laveraged Cloudinary for image and template asset management with on-the-fly transformations; containerized the full stack using Docker with separate service containers for frontend, backend, and database.

Cloud Share — Full-Stack File Sharing Application Dec – Jan 2026

ReactJS · Tailwind CSS · Spring Boot · MongoDB · Clerk Auth · Razorpay · Docker

- Engineered a feature-rich file manager web app supporting upload, download, in-browser preview for multiple file types (images, PDFs, documents), and shareable link generation with fine-grained public/private access control, expiry-based link management, and download tracking analytics.
- Integrated Razorpay payment gateway for premium storage tier upgrades with webhook-based subscription state management; implemented Clerk-based authentication with role-aware routing, protected pages, and a fully responsive, component-driven UI using reusable Tailwind CSS modules and custom hooks.
- Architected the Spring Boot backend with RESTful endpoints covering file metadata management, access control logic, storage orchestration, and usage quota enforcement; containerized the complete application stack with Docker Compose enabling one-command local and production deployment.

Money Manager — Personal Finance Tracking Application Aug – Oct 2025

React Native · Expo · React Navigation · Clerk Auth · PostgreSQL (Neon)

- Developed a cross-platform mobile application for personal finance management with real-time balance calculation and transaction tracking, improving usability and financial visibility.
- Implemented secure authentication using Clerk with 6-digit OTP email verification, protected routes, and session management to ensure safe user access.
- Designed and managed the PostgreSQL (Neon) database, creating efficient schemas and integrating APIs for real-time data updates.
- Designed an intuitive user experience with income/expense tracking, transaction history, pull-to-refresh, and dynamic UI updates, delivering a responsive app compatible with both iOS and Android platforms.

CERTIFICATIONS & ACHIEVEMENTS.

• Oracle Cloud Infrastructure 2025 Certified Foundations Associate. • SQL Certification (MySQL). • Deloitte Technology Job Simulation — Frontend Development (Forage, Aug 2025). • Skyscanner – Front-End Software Engineering Job Simulation
