PROFESSIONAL SUMMARY

Aspiring Software Developer with hands-on experience in Frontend Development, API Integration, and Workflow Automation using n8n. Proficient in building responsive web applications using React, JavaScript, and Vite, with a strong understanding of modern development practices. Experienced in developing AI-powered automation workflows, API-driven applications, and booking systems. Strong problem-solving skills, quick adaptability, and a passion for learning new technologies while contributing to innovative software solutions.

EDUCATION

RCC Institute of Information Technology

Master of Computer Applications | CGPA: 7.84

Oct 2024 – Jul 2026

Kolkata, West Bengal

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+)

Frontend: React.js, React Native, HTML5, CSS3, Tailwind CSS

Backend: Spring Boot

Databases: MySQL, MongoDB

DevOps & Tools: Git, GitHub, Docker, n8n

PROJECTS

Invoice Generator — Digital Billing & Payment Solution

Sep – Dec 2025

ReactJS · Spring Boot · MongoDB · Clerk Auth · Docker · Cloudinary

- Built a full-stack invoice management platform enabling users to create, customize, preview, and export invoices as PDFs with dynamic templating and real-time data binding between form inputs and the rendered invoice layout, supporting multiple currency formats and tax configurations.
- Implemented role-based access control distinguishing admin and client views; integrated Clerk for secure multi-user authentication including social login, session handling, and protected API routes backed by JWT token validation on the Spring Boot layer.
- Used MongoDB for persistent invoice and client data storage with indexed querying for fast retrieval across large datasets; leveraged Cloudinary for image and template asset management with on-the-fly transformations; containerized the full stack using Docker with separate service containers for frontend, backend, and database.

Cloud Share — Full-Stack File Sharing Application

Dec – Jan 2026

ReactJS · Tailwind CSS · Spring Boot · MongoDB · Clerk Auth · Razorpay · Docker

- Engineered a feature-rich file manager web app supporting upload, download, in-browser preview for multiple file types (images, PDFs, documents), and shareable link generation with fine-grained public/private access control, expiry-based link management, and download tracking analytics.
- Integrated Razorpay payment gateway for premium storage tier upgrades with webhook-based subscription state management; implemented Clerk-based authentication with role-aware routing, protected pages, and a fully responsive, component-driven UI using reusable Tailwind CSS modules and custom hooks.
- Architected the Spring Boot backend with RESTful endpoints covering file metadata management, access control logic, storage orchestration, and usage quota enforcement; containerized the complete application stack with Docker Compose enabling one-command local and production deployment.

Money Manager — Personal Finance Tracking Application

Aug – Oct 2025

React Native · Expo · React Navigation · Clerk Auth · PostgreSQL (Neon)

- Developed a cross-platform mobile application for personal finance management with real-time balance calculation and transaction tracking, improving usability and financial visibility.
- Implemented secure authentication using Clerk with 6-digit OTP email verification, protected routes, and session management to ensure safe user access.
- Designed and managed the PostgreSQL (Neon) database, creating efficient schemas and integrating APIs for real-time data updates.
- Designed an intuitive user experience with income/expense tracking, transaction history, pull-to-refresh, and dynamic UI updates, delivering a responsive app compatible with both iOS and Android platforms.

CERTIFICATIONS & ACHIEVEMENTS

• Oracle Cloud Infrastructure 2025 Certified Foundations Associate. • SQL Certification (MySQL). • Deloitte Technology Job Simulation — Frontend Development (Forage, Aug 2025). • Skyscanner – Front-End Software Engineering Job Simulation
